ADEMAN

ASSOCIATION OF WOOD ENTREPRENEURS OF NAVARRE

Business association created almost 40 years ago, in which around 80 companies are integrated

For ademan, the proximity between the mountains, the sawmill and the production of timber products is important……

Ademan promotes the use of certified wood

Sustainable forestry ensures that the process of CO_2 absorption and oxygen emission is maximised. Trees are sustainably harvested at the peak of their cycle, and replaced with younger, more carbon efficient trees, before their ability to absorb and emit declines.

The use of wood as raw material is a clear example of circular economy and sustainability

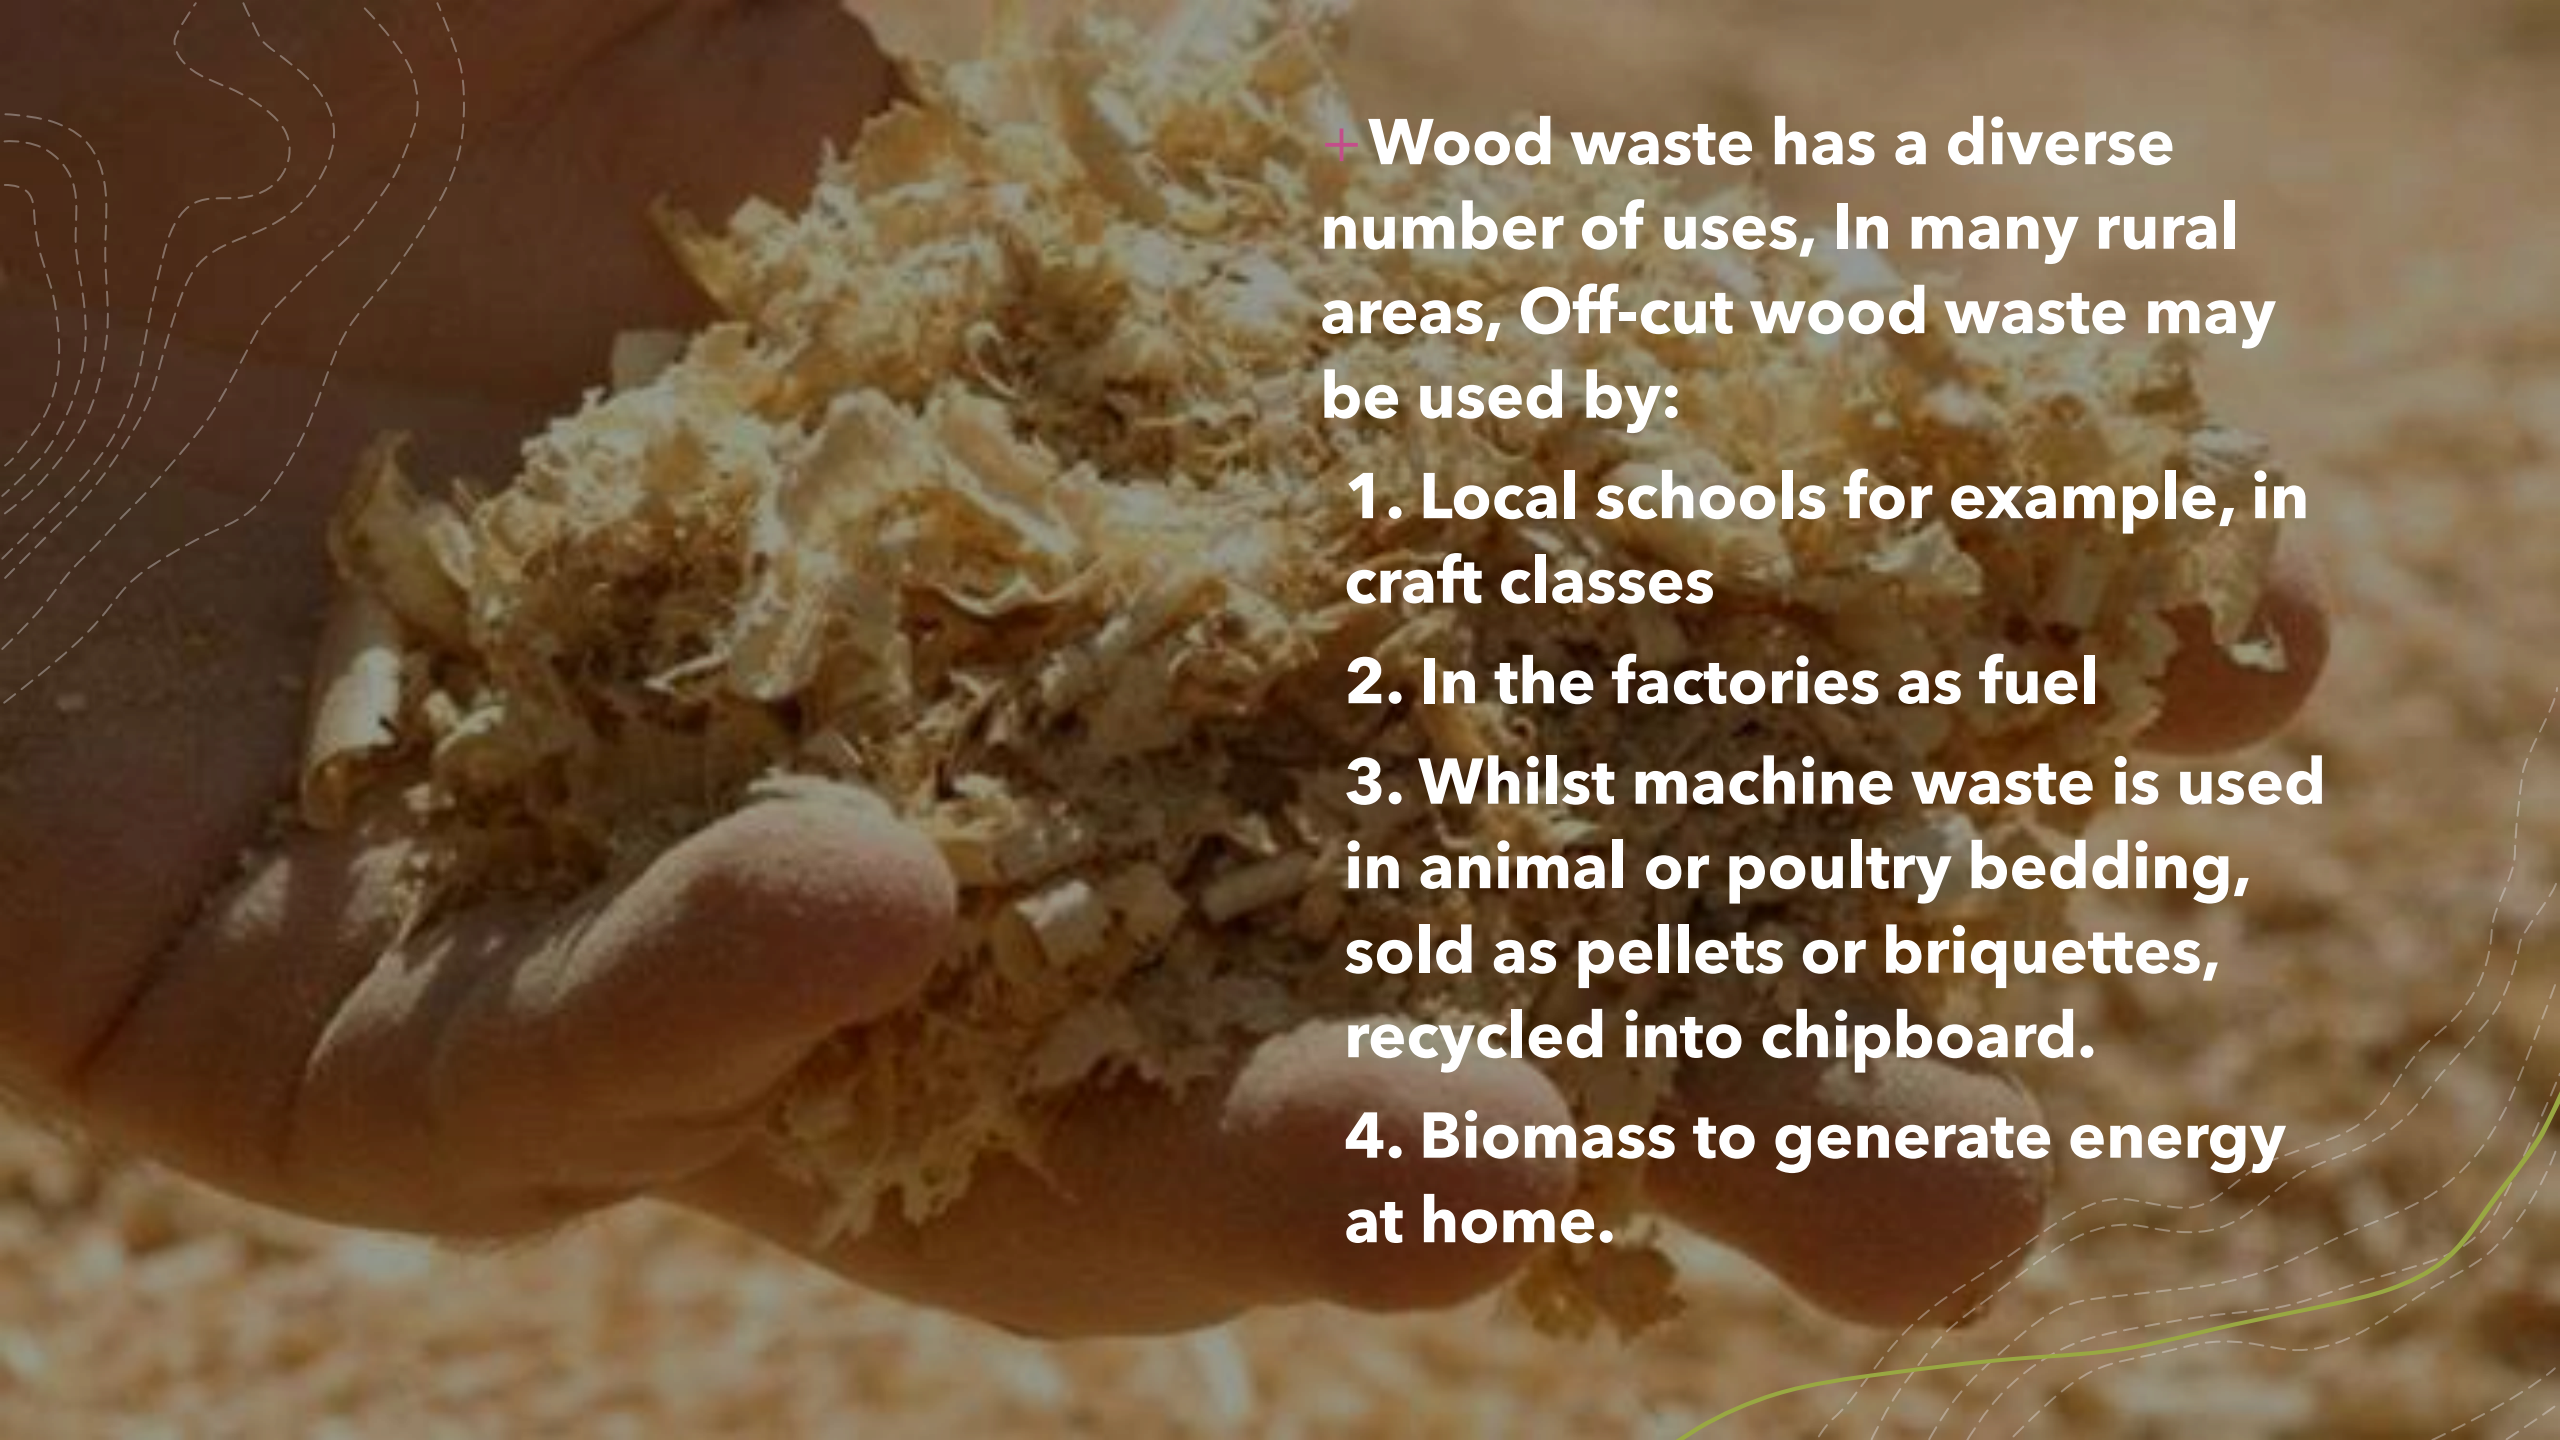
At ADEMAN we believe that the use of wood encourages:

+1.Use of local wood = Boost to the local economy

+2. Wood = Carbon sink

+3. Reduce climate change

+4. The waste generated is used as a source of energy



+Wood waste has a diverse number of uses, In many rural areas, Off-cut wood waste may be used by:

1. Local schools for example, in craft classes
2. In the factories as fuel
3. Whilst machine waste is used in animal or poultry bedding, sold as pellets or briquettes, recycled into chipboard.
4. Biomass to generate energy at home.

+ **The newest thing in sustainable construction is, uh, wood.**

+ **There are many, many benefits of using wood instead of concrete and steel**
